

# **Lesson Plan**

## Unique Module Number:

## Objective (Purpose) and Reason:

This workshop is designed to assist Participants in determining the proper decon procedures and them impact on health and safety Upon successful completion, Participants will know the proper way to decon and the impact on the environment as well as their loved ones.

### **Competency Statement OS 01**

Date:4/28/17 Version:1.0

### **Learning Outcomes:**

- Environmental Definition of Decon.
- How do you Prevent cross contamination?
- State the most important reason for decon.

#### **Resources:**

EPA guide to field cleaning drilling equipment

National drilling association safety manual

Topic Learning Activities Delivery Estimated Time

Activity2  Introduction  Activity3  Definition of Decon  Becon  Activity4  Participants listen to the correct environmental definition of Decon.  Activity5  Is the "clean" part really clean?  Activity6  Participants will handle a seemingly Clean and Dirty item  Activity6  Participants will observe the "clean" item under a black light review  Clean  Activity6  Participants will observe the "clean" item under a black light and see that Clean Is not always  Clean  Activity7  Shaving cream video  3 Min  Purpose, Reason, Competency Standard, Learning  Decontamination is the process of neutralizing, washing and rinsing equipment that comes in contact with formation material or ground water that is known or is suspected of being contaminated.  Identify the need for decon based on visual clues  Shaving cream video  2 Min  Shaving cream video  Activity4  Participants will handle a seemingly Clean and contaminated.  Review the item you determined was clean and consider the possible impact on your family and the environment.
